

Water Weekly

For the week of 06/16/25

Water conditions

Since late March 2025, drought area in the state has contracted 9 times in 11 weeks. The latest drought map, for conditions as of June 10, shows the least amount of the state impacted by drought since September 2024. We can expect more contraction on next week's map.

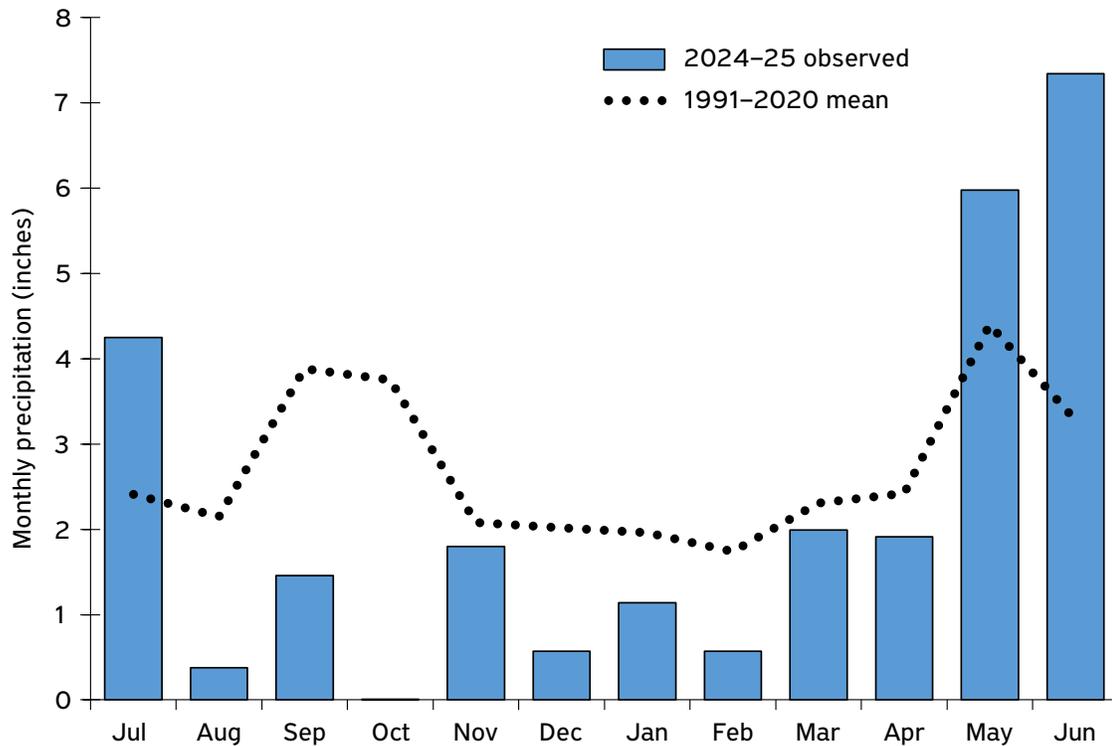

Drought conditions

- 34%** now
- 36%** a week ago
- 54%** three months ago
- 29%** a year ago

Intensity

- None
- D0** Abnormally dry
- D1** Moderate drought
- D2** Severe drought
- D3** Extreme drought
- D4** Exceptional drought

San Antonio precipitation

Between August 2024 and April 2025, the San Antonio area endured nine consecutive months of below average precipitation, the fifth driest August to April since 1946. May 2025 rainfall was finally more than average. And as of the 15th of the month, June rainfall is already well above average.
